

The figure shows a plot of a function on a coordinate system. The horizontal axis is a solid black line. A vertical black line is drawn at a specific point on the horizontal axis. To the left of this vertical line, a broad, low-amplitude blue curve rises from the horizontal axis. To the right of the vertical line, the curve dips slightly and then forms a sharp, high-amplitude peak before returning to the horizontal axis. The label $T = 0$ is placed to the right of the vertical line, indicating the position of the transition.

$$T = 0$$
