

Model A

Model B

$\hat{\mu}_5$

The diagram illustrates a statistical comparison between two models, Model A and Model B, represented by normal distribution curves. The horizontal axis is marked with several data points: red circles and blue crosses. A vertical dashed line with a horizontal bar at the top indicates the mean of Model A, labeled $\hat{\mu}_5$. The curves overlap significantly in the center, with Model A being slightly taller and narrower than Model B.
